EXPERIENCE

Freelance Frontend/Web Developer – May 2025 – Present

- Developed and maintained 60+ responsive tourism websites using JavaScript, HTML, and CSS, ensuring cross-browser compatibility across all deliverables.
- Integrated Mapbox GL JS for interactive maps and location-based navigation across client sites.
- Applied technical SEO practices and performance optimizations across multiple concurrent projects; managed remote client communication and delivery independently.

Freelance WordPress Custom Theme Developer – January 2025 – April 2025

- Converted 9+ static HTML templates into custom WordPress themes using PHP and Advanced Custom Fields (ACF), following WordPress template hierarchy standards.
- Built reusable theme components and flexible content structures to support scalable client content management.
- Delivered responsive, cross-device-compatible layouts across desktop and mobile.

Freelance Software Developer (Chrome Extensions) – October 2024 – December 2024

- Delivered UI fixes, feature enhancements, and bug fixes across 4 Chrome extensions using JavaScript and the Chrome Extensions API.
- Refactored components and scripts to improve code maintainability and extension stability.
- Collaborated with overseas client to clarify requirements and ship iterative changes efficiently.

Fullstack Developer Intern • Jairosoft, Inc. – June 2024 – August 2024

- Built an internal timesheet management MVP using Bubble.io, designing UI workflows and database logic.
- Participated in Agile sprints, documentation, and QA testing to support on-time project delivery.

PROJECTS

OhPera - Payables Tracker • In Development • GitHub

- Full-stack payables tracking application with a Next.js frontend and a REST API backend built with Node.js, NestJS, and Prisma on PostgreSQL.

Minicms - Dynamic Portfolio with Admin Dashboard • In Development • GitHub

- A field-type-driven CMS for portfolio websites using Astro 6, SQLite (libsql/D1), Drizzle ORM, and Alpine.js; content types are stored and managed through an admin UI rather than config files.

Enhanced LSTM with ELU for Stock Market Forecasting • GitHub • 2025

- Undergraduate thesis implementing a deep learning model for time-series stock market prediction using Python; produced comparative performance analysis across activation functions and forecasting accuracy.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, PHP, Python
